

Unique Safety Barrier Solutions on display at  **HEALTH SAFETY 08**
Reebok Stadium, Bolton 8-9 October

A-Safe (UK) Ltd have selected Health & Safety 08 at the Reebok Stadium as the first venue at which their hugely successful and unique range of polypropylene safety barrier and related products will be exhibited under the A-Safe Barrier™ product brand.

First introduced in 2003 the product design has been continuously developed and enhanced to improve both product performance and cost effectiveness. In addition new products have been, and will continue to be, added to the range at regular intervals. These additions have often been as a result of customer requests for the innovative principles and materials on which the design and manufacture of the products are based to be incorporated in other product types. This ensures that a new product type will provide the many user performance, maintenance and cost benefits exhibited by the A-Safe products in comparison to products manufactured from more traditional materials.

The customer base, as with the product range, has been steadily and significantly increased to include many well known international corporate names such as DHL, Kimberly Clarke and Coca Cola.

On display on stand number 204 will be some of the products available from the range of safety barriers, bollards and associated safety products available from A-Safe (UK) Ltd. The products 'flex' to absorb impact forces and then recover after impact to return to their original shape providing an unparalleled, cost effective safety solution.

All the products are highly visible, quick and easy to install, are simply assembled from lightweight components without the need for nuts, bolts, brackets or welding, and comply with current Health and Safety Standards and Regulations.

Tested and certified to relevant British Standards the products offer an effective, visually appealing, low maintenance cost solution wherever there is a requirement for barriers and bollards to be installed in and about the workplace and in other facilities and premises.
