

NEW WEB-BASED AUDIT SOFTWARE LAUNCHED

ACT Associates on behalf of RMS Publishing is pleased to announce the release of its web based audit software "Compliance Manager Auditor". The software provides an efficient way to ensure compliance throughout your organisation. Audit checklists can be tailored to meet your requirements.

Compliance Manager enables:

- Fast set up and auditing against standard Audit 123 checklists
- Easy creation of tailored checklists that meet your requirements
- Creation of audits for yourself as an experienced auditor or assignment of audits to location to enable their self declaration of compliance with validation and verification protocols
- Efficient assignment of actions for responsible people to meet by a specific date
- Use of a formal corrective action system (CAR)
- Tracking of actions assigned.

Checklists

Audits can be generated to meet your complete range of compliance needs, including safety, health, environmental, quality and process issues. You can create your own audit checklists to reflect your organisation's needs including those to meet BS 18001 or ISO14001.

Audit approach

Compliance Manager enables you to set up audits for one or many locations of your organisation. The software guides the auditor through the natural audit process, confirming compliance and leading the auditor to improvement actions. Compliance manager allows you to upload evidence (such as reports, photographs or interview recordings) that supports your decision making and allocate formal action management through the use of the Corrective Action Report (CAR) system.

Reports

Audit checklists can be printed out to allow data gathering away from the computer. Reports can be derived from a comprehensive filter process enabling reports on such things as outstanding actions through to a full audit report of findings.
